BOFA INTERNATIONAL IS A MULTI AWARD-WINNING WORLD LEADER IN PORTABLE FUME EXTRACTION AND FILTRATION TECHNOLOGY.

We design, develop and manufacture systems for a wide range of industrial sectors and applications.

Our products ensure operator safety by capturing harmful dust and fumes which are generated during industrial processes while minimising disruption to production.

WHY BOFA
- Over 30 years’ experience
- Market leader
- Unrivalled expertise in portable fume and dust extraction and filtration
- Innovative world-class solutions
- High quality, affordable systems
- Developed by experts
- Dedicated in house capabilities
- Offices in the UK, USA and Germany
- Global network of distributors
- Keeping the world working safely
- Continual investment
- Environmental policy
- A Donaldson company

OUR PRODUCTS
- Proven safe and innovative solutions
- Fast and easy to install
- Low level noise
- Clean and energy efficient
- Compact designs with small footprint
- Long life filters with low replacement costs
- Patented products, software and filter technology
- Highest quality standards, including our own SureCHECK standard
- Global systems suitable for a wide range of applications
- Award winning
We apply our extensive expertise to constantly find new methods to allow customers to protect both their employees and the environment, whilst reducing energy consumption and downtime.

This is essential when striving to satisfy today’s ever increasing demand for low operating costs and the challenges presented through the development of new materials and processes.

Our systems ensure hazardous particles and fumes are captured and filtered out before the cleaned air is recirculated back into the production environment.

We develop reliable, simple to use and cost effective products that meet and exceed global health and safety legislation, encouraging green initiatives and environmental good practices throughout our manufacturing process.

Our in house approach provides our customers with the peace of mind that specialist advice and expertise will always be at hand to deliver timely and effective product solutions, from the initial research and development to our comprehensive pre and post sales support.

**QUALITY MANUFACTURING**

Our philosophy is to maintain control of supply and quality standards throughout the entire manufacturing process of our products. We have an extensive range of proven fume extraction solutions to satisfy a broad range of applications - from single user systems to units that pack a heavyweight punch with unsurpassed filter capacity, high performance and everything inbetween. All made to the highest international manufacturing standards.

**OVER 30 YEARS OF EXCELLENCE**

**Ours is an unrivalled heritage of providing portable fume extraction solutions throughout the world.**
EXPERTISE AND INNOVATION

Our dedicated team has a wealth of knowledge and unrivalled expertise within our field which is established and trusted by all sizes of business, from global market leaders to niche producers in a wide cross section of industries.

Innovation is at the heart of everything we do, meaning we develop the most technically advanced products on the market. But we also have the flexibility to develop bespoke solutions to suit our customers’ requirements. Our programme of ongoing investment in research and development allows us to continuously improve products and pioneer new cutting-edge technologies, bringing the best and latest developments to our portfolio.

AWARD WINNING TECHNOLOGY

In 2017 we were awarded the Queen’s Award for Enterprise: Innovation for our revolutionary Intelligent (iQ) Operating System, which is transforming the way that organisations around the world are able to protect the health of employees and improve production processes.

Our Queen’s Award for International Trade in 2012, recognises that over 90% of our products are now exported overseas.

For more information about iQ, see page 8.

2019
iQ2 launched (Page 6)
INTELLIGENT (iQ2) OPERATING SYSTEM

The next generation of fume extraction technology is here!

The huge success of BOFA’s unique Intelligent (iQ) Operating System established a step change in fume extraction technology. It takes performance and safety parameters to a new level and ensures maintenance downtime and ownership costs are kept to a minimum. See page 8 for more information on this award-winning technology.

iQ2 builds on this, adding significantly to the list of seller and user benefits. It combines field proven iQ reliability with a range of new and highly advanced feature enhancements, including Fieldbus connectivity; two-way communication and control; and SMART filter technology.

INDUSTRY 4.0

Driven by Industry 4.0, iQ meets tomorrow’s needs, today, keeping you and your customers ahead in the market.

It incorporates Fieldbus connectivity, making it easy to integrate into existing factory systems and the intuitive interface makes it simple to use. By connecting machines, businesses can create intelligent networks along the entire value chain that can control each other autonomously. Remote monitoring and internal control can be achieved thanks to the unique two-way data streaming capabilities. Systems self-analyse to enable predictability, providing management with more insight on the status of the factory and allowing interventions, such as filter changes, to take place at the best possible time – achieving just-in-time maintenance and near zero downtime.

All this combines to deliver an enhanced user experience:

- Built on proven BOFA iQ technology
- Fieldbus connectivity
- Two-way communication and control
- Hi-resolution colour touch screen display
- Customisable – including multi language navigation and bespoke branding
- Effective filter monitoring, providing accurate filter life prediction
- Live remote monitoring for greater control
- Real-time capability to collect and analyse data
- Fully configurable alarms and warnings
- Advanced reporting tools for better support
- SMART filter technology as an optional extra
- Simple software updates, making it futureproof
Our new Oracle 2 brings a host of additional benefits. With a fresh new look, it has new features designed to meet the increased performance and standards of today’s manufacturing environment:

- **CleanChange** - our new filter housing facilitates cleaner filter changes, leaving you with a cleaner unit and working environment, coupled with reduced contamination when swapping out filters
- **Larger filters** - improve filter life, saving you money and time changing filters
- **Multiple power leads** make this a truly universal product with one part number the world over
- **Quieter** - with an optional noise reduction system.

What’s more, it will come with iQ2 as standard, making this the most advanced fume extraction unit on the market.

**SMART FILTER TECHNOLOGY**

**Improve filter performance.**

Incorporating proven RFID technology, each SMART filter has a uniquely coded non-removable tag, allowing the iQ2 operating system to establish authenticity and suitability of the filter being used. SMART filter technology provides the end user with the added safety assurance that they are using a proprietary filter of the right type for their application and chosen extraction unit.

SMART filter technology is an optional extra*

**THE FUTURE**

**ORACLE 2**

For assured filter performance:

- iQ2 system integration
- Anti-tamper RFID technology
- Correct filter detection
- Enhanced data collection
- Remote filter monitoring

For enhanced filter experience:

- Legislative compliance
- Reduced cost of ownership
- Superior filter performance
- Optimised running time
- Planned maintenance scheduling

For trouble free filter ownership:

- Ensures the highest yield
- Protected performance
- Genuine filter programme
- Remote filter management

SMART FILTER TECHNOLOGY

See SMART filter technology featured on our AD Oracle iQ2 on page 16.
INTELLIGENT (iQ) OPERATING SYSTEM

Pioneering fume extraction.

Our award-winning Intelligent (iQ) Operating System brings multiple performance enhancements for higher efficiency of extraction, individual filter status monitoring and integral design features that combine to deliver a lower cost of ownership.

Most importantly, iQ addresses the issue dreaded by most production teams - downtime - by minimising the potential for interrupting production for unplanned filter changes.

Sophisticated and advanced technology is inbuilt, providing a user-friendly and intuitive experience with the data being easy to access and analyse locally or remotely (from data downloaded via USB). It means that filter changes can be planned at a time to minimise or eliminate interruptions to production so businesses can continue as usual, as well as helping to avoid any costly or time-consuming service call-outs.

The iQ Operating System incorporates a method for monitoring the status of both the pre filter and combined (main) filter. Pre blockage warnings provide operators with ample time to prepare for a change by identifying which filter needs replacing and when so the uncertainty and guesswork is removed.

A user-friendly design is consistent across all iQ products for a more uniform look in environments where multiple units are in use. The operating ‘easy read’ control panel is on the top of each unit on a sloping fascia front so the data is easy to view.
Save filter life and money.

The DeepPleat DUO is the longest lasting pre filter available on the market, extending the life of your main filter and reducing the overall cost of ownership of your unit.

BOFA’s unique patent-protected DeepPleat DUO pre filter technology is designed to maximise filter life. It incorporates a large capacity drop-out chamber within the filter, along with an impressive surface area above the chamber to deal with a high volume and variety of particulate, ensuring optimised performance and filter life. Within the housing there is a sealed 200mm deep pleat layer of F8 media giving a surface area in excess of 6;12; and 30 sq metres.

Thanks to a specially moulded grommet style gasket situated within the drop out chamber the DeepPleat DUO is designed for easy and safe installation and replacement, which is particularly important as often harmful contaminants are captured within the filter.

The DeepPleat DUO is available in three different sizes, offering different drop-out chamber sizes and surface media areas:

WORKING WITH YOU
TO DELIVER A COMPLETE SOLUTION

We work with you to ensure you get the right solution for the right process. From initial requirements scoping through to after-sales care, we provide advice you can trust.

We have a wealth of experience working with OEMs, either supplying our existing systems or creating solutions to complement your products. Many of our OEM customers badge and sell our products as their own - confident that they will deliver performance, quality and reliability.

Working with BOFA you’ll get:
- High quality design and manufacture from a world leader in fume and dust extraction
- Technical support, pre and post sales
- Extensive dealer training from specialist engineers
- Immediate and after market revenue
- Access to our global network of dust and fume extraction experts

Our products are sold into more than 120 countries worldwide. Our network of trusted agents and distributors have the capability to provide local sales and service advice and will ensure that timely and appropriate support is always on hand.

Working with BOFA you’ll:
- Enhance your portfolio with our existing products or with a bespoke solution
- Add value to your offering
- Sell products with a proven pedigree
- Have a convenient solution
- Earn from protected aftermarket revenues
- Benefit from technical support and extensive dealer training from specialist engineers

Your customers will get:
- Affordable options with a high level of benefits
- Customised and branded products as required
- Enhanced health and safety compliance with the highest quality solution

We have a network of engineers throughout the UK who are experts in fume and dust extraction. Their wealth of technical and industry knowledge combined with their consultative approach to understand your processes and agree specifications means you can be confident you’re selecting the right product to suit your specific requirements.

Working with BOFA you’ll get:
- Expert consultation to ensure you have the solution you need
- Products for single to multiple users
- Unrivalled standard of service and support
- CE, UL and cUL compliant products
- Access to LEV service plan, implemented by our P601/P602/P604 certified engineers
- If you are based outside of the UK, our global network of distributors can help

Our products are sold into more than 120 countries worldwide. Our network of trusted agents and distributors have the capability to provide local sales and service advice and will ensure that timely and appropriate support is always on hand.

MARKET LEADING TECHNOLOGY

We are recognised as the market leader, delivering great value, high quality products.

We apply our in-depth understanding, developed over many years of designing and manufacturing fume extraction and filtration systems for a wide range of industries. This gives us the experience and expertise to ensure that our product solutions are the best available on the market.

Throughout this brochure you will see icons next to products to show their key features:

- **Intelligent (IQ) Operating System**
  IQ2 combines field proven IQ reliability with a range of new and highly advanced feature enhancements, including Fieldbus connectivity, two-way communication and control, and SMART filter technology. See page 6 for more information.
  Find out more: bofainternational.com/iq

- **DeepPleat pre filter**
  A DeepPleat pre filter consists of a pleated filter of 100mm depth or greater, allowing for increased surface area within a smaller area. This means DPF filters last a long time and do not take up a large footprint.
  Find out more: bofainternational.com/deeppleat

- **DeepPleat DUO pre filter**
  The DeepPleat DUO pre-filter technology is designed to maximise filter life. It incorporates a large capacity drop-out chamber within the filter. Above this chamber is an impressive surface area to deal with high volumes and variety of particulate, ensuring optimised performance and filter life.
  The DeepPleat DUO is designed for easy and safe installation and replacement, which is particularly important as often harmful contaminants are captured within the filter. See page 9 for more information.
  Find out more: bofainternational.com/deeppleatduo

- **HEPA filter**
  Removes 99.997% of particles at 0.3 micron in size.
  Find out more: bofainternational.com/hepa

- **ACF: Advanced carbon filter**
  ACF assures safe capture and removal of hazardous fumes. Contaminated air must remain in contact with the carbon bed for a period of time sufficient to ensure that no contaminants or odours are emitted (dwell time). Our design considers the balance between airflow rates and the type, depth and surface area of the carbon used to ensure suitability for the contaminants associated with the application and to ensure appropriate dwell times are achieved.
  Our filters have been developed to capture contaminants and odours, eliminating the risk of bypass and/or tunnelling.
  Find out more: bofainternational.com/acf

- **AFC: Automatic flow control**
  AFC allows the operator to preset correct airflow rates for the specific application, subsequently maintaining this airflow. This generates lower noise levels and ensures further protection of HEPA filters.
  Find out more: bofainternational.com/afc

- **SFT: SMART filter technology**
  The new SMART filter system works with IQ2 to give assured filter performance. It incorporates RFID technology, so each filter has a uniquely-coded, non-removable label, allowing the IQ2 Operating System to establish authenticity and suitability.
  Find out more: bofainternational.com/sft

- **RFA: Reverse flow air technology**
  RFA enhances filter performance and ensures longer filter life. It causes a fall in velocity and air direction change. Larger particulate falls out of the airstream into the drop out chamber. With less particulate entering the filter media the filter life is significantly increased. Contaminated air entering the drop out chamber is pulled vertically through the filters.
  Find out more: bofainternational.com/rfa

- **MVS: Multi voltage sensing unit**
  Our MVS units automatically sense local voltage and automatically operate between 90-257VAC for global use.
  Find out more: bofainternational.com/mvs

- **PATENTED technology**
  We invest in innovation and our products have a heritage of being tried, tested and trusted. We take great care in protecting our intellectual property and our integrity. Our product range includes aspects which are protected under patent copyright, design copyright, registered design and trade mark laws.
  Find out more: bofainternational.com/patented

- **SureCHECK quality standard**
  In recognition of the importance of quality, health and safety and environmental management, we have created our own stringent SureCHECK quality standard, applied to every product we make.
  Find out more: bofainternational.com/surecheck

- **ProTECT**
  Our ProTECT service plan gives you peace of mind that your LEV systems are being expertly maintained throughout their working life.
  Find out more: bofainternational.com/protect

LASER FUME EXTRACTION
ADVANTAGE range

By maintaining a dust-free operating area, our systems help to protect valuable equipment, maintain a higher quality mark and reduce the number of rejects and contaminants.

Applications
- Traceability and date codes
- Deep laser engraving
- Laser coding
- Laser marking
- Laser drilling
- Laser cutting
- Laser welding
- Laser etching
- Laser engraving
- Laser micro-machining
- Web scoring
- Laser perforating
- Laser cleaning
- Laser kiss cutting
- Laser pairing
BOFA’s ADVANTAGE range of laser fume extraction and filtration systems are designed for applications that generate particulate and gaseous volatile organic compounds (VOCs) within the laser coding, marking, cutting and engraving industries. Our Base units have been designed so that a number of manufacturer’s laser engravers can sit on top of the extractor, effectively doubling up as a work station.

**FEATURED PRODUCT – BEST IN CLASS**

**AD Oracle iQ2**

iQ2 takes performance and safety parameters to a new level, adding significantly to the list of seller and user benefits. It combines field proven iQ reliability with a range of new and highly advanced feature enhancements, including Fieldbus connectivity, two-way communication and control, and SMART filter technology.

**Standard features**
- Fieldbus connectivity
- Independent filter monitoring
- Filter status warnings
- Colour touchscreen
- Remote monitoring and control
- DeepPleat DUO pre filter
- HEPA filter

**Optional features**
- SMART filter technology

See page 6 for more detail about iQ2 and SMART filters

The premier choice and best in class solution with unique features in a global unit.

AD Access
A compact system for light duty laser marking, coding and engraving applications. The AD Access combines economic ownership with performance to match the small laser user, ensuring safe operator working conditions and product quality.

A three-stage filter condition indicator is included as a standard feature.

Approvals  CE | CUL | UL

AD Fusion
The AD Fusion has been designed to work with the new generation of low cost laser systems. It provides high performance at affordable prices and is ideally matched with smaller laser systems.

Approvals  CE
AD Nano
The AD Nano is ideal for small scale industrial environments and light to medium laser coding applications. The reverse flow air filter technology enhances filter performance and ensures longer filter life, with its DeepPleat DUO filter technology.

Approvals  CE

Product features
Comparison table on page 20-21

AD Nano+
This compact ‘go anywhere’ fume extraction system is feature-packed for big performance in small scale industrial sites and light laser coding applications. Incorporating many of the features found on our larger systems, the AD Nano+ is a cost effective solution for light to medium duty applications, making it the ideal choice for installations where floor space is limited.

The use of an auto-voltage sensing blower means that the unit can be used anywhere in the world.

Approvals  CE

AD Universal
This compact system is ideal for light to medium small scale industrial environments.

Approvals  CE

AD Oracle SA iQ
This compact laser fume extractor incorporates a powerful range of unique features into one unit. It uses a smaller pre filter to the AD Oracle IQ, but includes all the other features, making it ideal for lighter use applications.

Approvals  CE | cUL | UL

Also fits the FireBox MA and FireBox GA - See page 61

LASER FUME EXTRACTION
ADVANTAGE range

AD Oracle iQ

The AD Oracle iQ combines a powerful range of unique features into one compact unit. This versatile system can be used across a range of laser applications and the revolutionary auto-voltage sensing blower automatically self-adjusts to run on any voltage worldwide.

Approvals  CE  |  C U L  |  U L

Our inline AD Cyclone has been designed to separate lower particle sizes during laser marking process. See page 60.

Also fits the FireBox MA and FireBox GA - See page 61

AD Oracle iQ2

The next generation of fume extraction, the AD Oracle iQ2 combines field proven iQ technology with a range of new and highly advanced features, including Fieldbus connectivity; two-way communication and control; accurate filter monitoring - to ensure maximum lifespan and no unplanned maintenance - and remote reporting and diagnostics.

It can be used across a wide range of laser applications, with the option to have SMART filters.

See pages 6-7 for more information about iQ2 and SMART filters.

Approvals  CE

Our inline AD Cyclone has been designed to separate lower particle sizes during laser marking process. See page 60.

Also fits the FireBox MA and FireBox GA - See page 61

AD 500 iQ / 1000 iQ / 1500 iQ

These mid to high end laser fume extraction systems combine extremely large filter capacity with high airflow and pressure rates, making them the ideal choice for heavy duty applications that generate large amounts of particulate and gaseous organic compounds.

Performance has been further enhanced with the inclusion of several features including BOFA’s acclaimed patented iQ Operating System.

Approvals  CE  |  C U L  |  U L

AD 500 iQ / 1000 iQ / 1500 iQ fit the FireBox MA+ and FireBox GA+ - See page 61

IQ Intelligent (IQ) Operating System
DeepPleat pre filter
DeepPleat DUO pre filter
HEPA filter
ACF Advanced carbon filter technology
### AD 2000 iQ
The AD 2000 iQ's technology delivers superior and measurable performance, ensuring airflow and filtration is maintained even when particulates start to build up. The dual filter system creates maximum capacity while the three-stage filtration process ensures peak performance. This makes it suitable for the most demanding and complex installations, so you can rely on extended filter life, together with effective removal of fumes and particulates.

It's user friendly too, with a design that makes easy work of filter changes. The easy to read and access control display panel is conveniently located on top of the unit.

The AD 2000 iQ's design also permits greater flexibility of different exhaust installations and different configurations allowing recirculation via the rear panel or externally vented hose connection systems.

**Approvals** CE

---

### AD 4000 iQ
The AD 4000 iQ delivers superior and measurable performance, ensuring airflow and filtration is maintained even when particulates start to build up from the triple DeepPleat DUO and combined filter setup. This makes it suitable for the most demanding and complex installations, so you can rely on extended filter life, together with effective removal of fumes and particulates.

It's user friendly too, with a design that makes easy work of filter changes. The easy to read and access control display panel is conveniently located on top of the unit.

The AD 4000 iQ's design also permits greater flexibility of different exhaust installations. Different exhaust configurations allow recirculation via the rear panel or externally vented hose connection systems.

**Approvals** CE

---

### AD 4000
BOFA's AD 4000 laser fume extraction unit combines large filter capacity with high airflows. This combination makes the AD 4000 ideal for large laser engravers, laser cutters as well as multiple laser coding installations.

Easily accessible filters are accommodated by the uniquely styled gas spring assisted 'gull winged' doors, which allow for maximum space and ease when changing filters.

Unit interfaces such as stop/start and system failure are available as options.

**Approvals** CE

AD PVC iQ
The AD PVC iQ extraction system has been designed to effectively deal with the corrosive nature of the fumes generated when lasering PVC materials. The latest design specification includes many of the features associated with our AD Oracle iQ (page 16) model as standard but in addition all internally exposed surfaces have been coated to resist the corrosive nature of the fume and each unit is fitted with HCL and VOC sensors which continually monitor the exhaust air of the unit giving added safety assurance.

Approvals CE | CUL | UL

AD GoldSEAL + Cyclone
This unit offers the complete solution for the extraction, filtration and recovery of precious metals. The particles are collected in an easy to remove tray and the HEPA filter can be incinerated to reveal the precious metal collected during the filtration process.

Automatic flow control allows the user to pre-set correct airflow rates, for lower noise levels and further protection of the HEPA filter. The cyclone enables the separation of precious metals before they even reach the main extraction area, allowing for easier and more efficient collection, as well as prolonging the life of the main filter.

Approvals CE

AD Base 1 Oracle
Suitable for a range of lasers, the AD Base 1 Oracle combines a DeepPleat DUO pre filter and auto-voltage blower in a compact base system. BOFA’s easy-seal filter location makes filter change easy, quick and safe.

As with all our Base systems, this unit has the option of an onboard compressor for a compact installation.

Approvals CE

AD Base 2 Oracle
Adapting the AD Base 1 Oracle, this unit sits lower to allow larger bed lasers to be placed securely on top whilst giving a direct extraction system. This system also benefits from a DeepPleat DUO pre filter and multi voltage sensing unit.

As with all our Base systems, this unit has the option of an onboard compressor for a compact installation.

Approvals CE
**AD Base 3**

The AD Base 3 is designed for the smaller Universal Versa Laser. The optional onboard compressor makes this a compact installation.

**Approvals** CE

---

**AD Base C180**

Bespoke unit tailored to match the GCC C180 laser engraver. The dimensions of the unit allow the C180 to fit perfectly onto the extractor, effectively doubling it up as a work station. The unit is also offered with an onboard air compressor to provide the laser with its air assist requirements and comes complete with extraction hose kit and compressor link up on compressor models.

**Approvals** CE

---

**AD Base Z**

The AD Base Z has been designed specifically for the Epilog Zing laser engraver. The dimensions of the unit allow the Zing to fit perfectly onto the extractor, effectively doubling it up as a work station. The distinctive blue finish has been matched with the blue ends of the laser to give a stylish installation.

The unit is also offered with an onboard air compressor to provide the laser with its air assist requirements. All units come complete with extraction hose kit and compressor link up on compressor models.

**Approvals** CE

LASER FUME EXTRACTION
ADVANTAGE range

Mobile FumeKART
The FumeKART is the ideal portable air extraction and filtration unit and can be applied to a variety of applications.
Designed to filter dust particles, weld fumes, vapours and other pollutants from the work environment, the FumeKART is easy to operate and maintain and provides the additional benefit of being fully portable.
Users will have flexibility and the assurance of high performance filtration. A filter condition indicator is included as a standard feature, together with three-stage filtration: pre filter, HEPA and gas filter.

FILTER TECHNOLOGY
The majority of systems in the ADVANTAGE range incorporate three-stage filtration: pre filter, HEPA and chemical section. Many units are also enhanced with our patented DeepPleat DUO pre filter, with its large capacity drop-out chamber to ensure maximum filter capacity. See page 59-61 for our inline filters and cooling units.

bofainternational.com/filters

INLINE FILTERS
We have a range of inline filters ideal for heavy duty applications.
For more information, please see page 60-61.

ACCESSORIES
We have created a wide range of hose kits to complement the ADVANTAGE range. You’ll find the shape, size and combinations most suited to your laser application.
For more information, see page 58-59; contact your sales representative; or visit
bofainternational.com/accessories

HOW TO BUY BOFA
Go to page 10 to view our different buying options.

STANDARD FEATURES
- Intelligent (iQ) Operating System
- Intelligent (iQ2) Operating System
- Filter condition indicator
- High airflow & pressure rates
- Long life, low cost replacement filters
- Digital speed control
- Easi-seal filter location
- Auto sensing voltage (90-257V) for global use
- Automatic flow control system
- Lockable castors
- Acid resistant coating
- HEPA filter technology
- CE
- UL
- cUL
- Brushless motor
- SureCHECK quality standard
- ProTECT
- SMART filter technology
- VOC gas sensor (Volatile Organic Compound)
- Remote stop/start interface
- Filter change/system fail signal
- Onboard compressor
- Variety of arms/hoods

OPTIONAL FEATURES
- Lockable castors
- Acid resistant coating
- HEPA filter technology
- CE
- UL
- cUL
- Brushless motor
- SureCHECK quality standard
- ProTECT
- SMART filter technology
- VOC gas sensor (Volatile Organic Compound)
- Remote stop/start interface
- Filter change/system fail signal
- Onboard compressor
- Variety of arms/hoods

OUR LEADING TECHNOLOGY
- IQ2 Intelligent (iQ2) Operating System
- IQ Intelligent (iQ) Operating System
- DeepPleat DeepPleat pre filter
- DeepPleat DUO DeepPleat DUO pre filter
- HEPA HEPA filter
- AcF Advanced carbon filter technology

Automated soldering
BOFA’s range of solder fume extraction systems are designed for single, multiple-operator stations or automated processes that generate fume comprising: resin particulate and gaseous organic compounds.

Our range comprises two types of systems: tip (T) extraction, for high pressure/low airflow soldering processes; and volume (V) for low pressure/high airflow electronics processes.

FEATURED PRODUCT – BEST IN CLASS

V 250

Dual arm extraction system purpose built to protect two operators working on solder applications. The V250 is enhanced by multiple configuration options and hose kits.

Standard features
- Three-stage filtration
- Low noise levels
- Advanced carbon filter technology
- HEPA and gas combined filter
- Filter blocked indicator

For optional features, see page 29

Low noise level and fully comprehensive filtration - ideal for factories with changing production demands.

ELECTRONICS FUME EXTRACTION
Tip and volume range

TIP

TVT 2
A light weight and portable fume extraction system, which runs from compressed air rather than an electric supply, making it extremely quiet in operation. This venturi system requires six bar of compressed air and is capable of extracting fume from two operator stations. The TVT 2's high vacuum extracts and filters fumes and debris through small bore hoses and attachments. Ideally suited for soldering iron tip extraction, vac pens and any application requiring close proximity, such as microextraction.

Approvals
CE
Ideal partner to the solder iron connection kit - see page 58

Dimensions
170 x 170 x 150mm
6.7 x 6.7 x 5.9"
Airflow
22 l/min per tip
Technology
HEPA
Datasheet download
bofainternational.com/tvt2

T 1
Single operator high vacuum extraction system for hand solder applications. Designed specifically for portability and extremely low noise levels.

The T 1 extracts and filters fumes and debris through small bore hoses and attachments. Ideally suited for soldering iron tip extraction, vac pens and any application requiring close proximity, such as microextraction.

Approvals
CE
Ideal partner to the solder iron connection kit - see page 58

Dimensions
270 x 200 x 185mm
10.63 x 7.87 x 7.28"
Airflow
22 l/min per tip
Technology
HEPA
Datasheet download
bofainternational.com/t1

T 15
Mid-range high vacuum fume extraction system with a built in silencer for low noise levels. With its three-stage filtration and filter warning indicator, this is a true industry favourite, suitable for 5-15 operators. The T 15 extracts and filters fumes and debris through small bore hoses and attachments. Ideally suited for soldering iron tip extraction, vac pens and any application requiring close proximity, such as microextraction.

Approvals
CE
Ideal partner to the solder iron connection kit - see page 58

Dimensions
575 x 370 x 340mm
22.64 x 14.57 x 13.39"
Airflow
22 l/min per tip
Technology
HEPA
Datasheet download
bofainternational.com/t15

T 30A
The T 30A is the most advanced system in our range of high vacuum units. With a built in silencer, for low noise levels, a large carbon filter and a filter warning indicator this is a true industry favourite.

The T 30A extracts and filters fumes and debris through small bore hoses. It is ideally suited to hand soldering iron tip extraction, protecting up to 30 operators with its automatic airflow control and three-stage filtration process. The unit can also be used for vac pens and any application requiring close proximity, such as microextraction.

The automatic flow control allows the unit to be set to the optimum flow rate to suit the number of operators connected to the system. The unit will then maintain the set airflow over the life of the filters ensuring maximum protection to the operators.

Approvals
CE
Ideal partner to the solder iron connection kit - see page 58

**T 60**

The T 60 high vacuum unit is designed to extract and filter fumes and debris through small bore hoses and attachments. Ideally suited for soldering iron tip extraction, vac pens and any application requiring close proximity, micro extraction.

Due to the high concentration of debris generated from up to 60 operators, this system has been designed to keep the unit compact, but still utilise a comprehensive filter system. With this in mind, the unit incorporates a facility for retaining a high concentration of particulate within the filter enclosure.

**Approvals** CE

**Dimensions** 700 x 475 x 770mm
27.6 x 18.7 x 30.3”

**Airflow/Pressure** 180m³/hr / 30mbar
106cfm / 30mbar

**Technology**

Datasheet download
bofainternational.com/t60

---

**T 100**

The T 100 high vacuum unit is designed to extract and filter fumes and debris through small bore hoses and attachments. Ideally suited for soldering iron tip extraction, vac pens and any application requiring close proximity, micro extraction.

Due to the high concentration of debris generated from up to 100 operators, this system has been designed to keep the unit compact, but still utilise a comprehensive filter system. With this in mind, the unit incorporates a facility for retaining a high concentration of particulate with the filter enclosure.

**Approvals** CE

**Dimensions** 700 x 475 x 770mm
27.6 x 18.7 x 30.3”

**Airflow/Pressure** 22 l/min per tip

V 300E
Entry level arm fume extraction for solder applications. This compact, low cost system is capable of generating high airflow rates from a range of bench top attachments, including larger hoses. This fume extraction unit can be positioned comfortably under a bench with a simple installation kit to connect to the most suitable extraction accessory.

Approvals: CE

Dimensions: 450 x 330 x 310mm
Airflow/Pressure: 320m³/hr / 5mbar
Technology: HEPA filter
Datasheet download: bofainternational.com/v300e

V 350E
The V 350E is a compact, low cost extraction system, which is capable of generating high airflow rates from a range of bench top attachments, including larger hoses. This fume extraction unit can be positioned comfortably under a bench with a simple installation kit to connect to the most suitable extraction accessory.

Approvals: CE

Dimensions: 517 x 370 x 370mm
Airflow/Pressure: 540m³/hr / 4mbar
Technology: HEPA filter
Datasheet download: bofainternational.com/v350e

V 600
A truly state of the art fume purification solution, the V 600 is within our high end range of extraction systems, combining large filter capacity with high airflows and pressure. It benefits from reverse flow design and DeepPleat pre filter technology for extremely long filter life. This unit incorporates three-stage filtration, a filter condition display, and built in silencing and can accommodate up to seven operators.

Approvals: CE

Dimensions: 590 x 405 x 465mm
Airflow/Pressure: 350m³/hr / 96mbar
Technology: HEPA filter
Datasheet download: bofainternational.com/v600

V Oracle SA iQ
Our most technically advanced global solution for high volume arm solder fume extraction. The V Oracle SA iQ has been enhanced with BOFA’s iQ Operating System and incorporates a powerful range of unique features into one compact unit.

Approvals: CE

Dimensions: 745 x 450 x 515mm
Airflow/Pressure: 380m³/hr / 96mbar
Technology: HEPA filter
Datasheet download: bofainternational.com/v-oracle-sa-iq
**V Oracle iQ**

This advanced high volume tip extractor combines a powerful range of features into one unit. This versatile unit can be used across a range of electronics applications and the revolutionary auto-voltage sensing blower automatically self adjusts to run on any voltage worldwide.

**Approvals** CE

---

**V 1000 iQ / 1500 iQ**

These high volume fume extraction systems combine extremely large filter capacity with high airflow and pressure rates. These are the ideal choice for heavy duty hand and machine automated solder applications that generate large amounts of particulate and gaseous organic compounds. The V 1000 iQ can cater for up to 15 operators and the V 1500 iQ can cater for up to 20 operators, as a centralised system or can be used to extract fumes from automated soldering machines.

**Approvals** CE | cUL | UL

---

**V 2000 iQ**

The V 2000 iQ’s technology delivers superior and measurable performance, ensuring airflow and filtration is maintained even when particulates start to build up. The dual filter system creates maximum capacity while the three-stage filtration process ensures peak performance. This makes it suitable for the most demanding and complex installations, such as reflow ovens, wave soldering machines and conformal coating systems, so you can rely on extended filter life, together with effective removal of fumes and particulates.

It’s user friendly too, with a design that makes easy work of filter changes. The easy to read and access control display panel is conveniently located on top of the unit. The V 2000 iQ’s design also permits greater flexibility of different exhaust installations. Different exhaust configurations allow recirculation via the rear panel or externally vented hose connection systems.

FILTRATION TECHNOLOGY

Our electronics range is designed around a complete three-stage filtration setup. These three stages give complete filtration at all levels and provide protection from different hazardous particulate and fume elements. The cheaper pre filter is designed as a barrier for the majority of contaminate, protecting the more expensive HEPA and carbon filters, allowing for longer filter life and lower cost of ownership across the lifetime of the unit.

For more information visit bofainternational.com/filters

ACCESSORIES

We have created an extensive range of accessories and hose kits to complement the electronics range. From LED light arms to down draught trays and cowls, you’ll find the perfect accessory to match your extractor and an array of hose kits in many shapes, sizes and combinations most suited to your application - see page 58; contact your sales representative for more information; or visit bofainternational.com/accessories

FUME CABINETS

We have a comprehensive range of fume extraction cabinets suitable for the electronics industry, from small applications right up to large scale processes.

See pages 52-53 for more information.

MOBILE FUMEKART

This unit is the ideal portable extraction system for variety of soldering applications that need a portable system.

See page 20 for more information.

V 4000

High airflow fume extraction system for reflow ovens, wave solder machines and conformal coating systems.

BOFA’s V 4000 volume fume extraction system has the capacity to be used on all manufacturers of automated soldering systems such as reflow ovens.

Large filter capacity and vast carbon filters ensure long filter life and optimum extraction even when lead free solder is used.

Adjustable and regulated airflow control ensures consistent temperatures within the solder machine reflow oven, throughout the life of the filters.

PRINTING & 3D PRINTING
FUME EXTRACTION

PrintPRO and 3D PrintPRO range

Applications - Printing
- Flags, banners & posters
- Direct to fabric
- Dye sublimation
- UV printing
- Solvent ink
- Mid solvent ink
- Low solvent ink
- MEK
- Flexographic printing
- Letter press plates
- Digital flexo plates
- UV coating
- Inkjet printing
- Screen printer

Applications - 3D Printing
- Stereolithography
- Digital light processing
- Continuous digital light processing
- Fused filament fabrication
- Material jetting
- Nano particle jetting
- Drop on demand
- Binder jetting
- Multi jet fusion
- Selective laser sintering
- Direct metal laser sintering
- Selective laser melting
- Electron beam melting
- Laser engineering net shape
- Electron beam additive manufacturing
- Laminated object manufacturing
BOFA's range of PrintPRO and 3D PrintPRO print fume extraction systems are designed for applications that generate particulate and gaseous organic compounds within the wide and super-wide printing sector. Solutions are available for a variety of ink types including: solvent, UV and dye sublimation.

PrintPRO Universal

The flagship product in our printing range, the PrintPRO Universal is a compact unit with a large gas filter. It is designed exclusively for the print and print finishing industries with unique features to effectively capture and remove a wide range of solvents generated within these environments, including MEK, ketones and ozone from UV applications.

The unit is easily adapted to a huge range of environments, including wide format printing, inkjet coding printers (CIJ) (both solvent and UV) and numerous mailroom applications such as UV coating, hot melt glue binding and mailwrap polywrapping.

Standard features

- Long life, low cost replacement filters
- High airflow pressure rates
- Advanced carbon filter technology

For optional features - see page 37

**PrintPRO 2000 iQ**

The PrintPRO 2000 iQ fume extraction unit packs a heavyweight punch with the unsurpassed filter capacity of two DeepPleat DUOs and high performance for the printing industry.

Its technology is proven to deliver superior and measurable performance, ensuring airflow and filtration is maintained even when particulates start to build up. Its high vacuum and pressure makes it suitable for the most demanding and complex installations, so you can rely on extended filter life, together with effective removal of fumes, solvents and particulates.

It's user friendly too, with a design that makes easy work of filter changes. The easy to read and access control display panel is conveniently located on top of the unit. The PrintPRO 2000 iQ's design also permits greater flexibility of different exhaust installations and configurations allowing recirculation via the rear panel or externally vented hose connection systems.

**PrintPRO 4000**

BOFA’s PrintPRO 4000 print fume extraction unit combines large filter capacity with high airflows.

This is our high end fume extraction and filtration system and has been purposely designed to filter the fumes generated by printers. It combines extremely large filter capacity with high airflows and pressure. It is ideal for heavy duty applications that generate large amounts of particulate and gaseous organic compounds.

Easily accessible filters are accommodated by the uniquely styled ‘clam shell’ and ‘gull winged’ doors, which allow for maximum space and ease when changing filters.

Unit interfaces such as stop/start and system failure are available as options.

**Approvals** CE

---

**PrintPRO Oracle DS**

The PrintPRO Oracle DS is our mid to high end fume extraction and filtration system. It has been purposely designed to filter the fumes generated from dye sublimation printers and combines extremely large filter capacity with high airflows and pressure. This combination makes it ideal for heavy duty applications that generate large amounts of particulate and gaseous organic compounds.

The additional feature of BOFA’s ‘easi-seal’ filter location mechanism makes filter change easy, quick and safe. A truly state of the art print fume purification solution.

**Approvals** CE

---

**PrintPRO 400 DS / 800 DS / 1200 DS**

These mid to high end fume extraction and filtration systems have been purposely designed to filter the fumes generated from dye sublimation printers. A hydrophobic HEPA filter is fitted as standard and an optional gas filter can be fitted as required.

These extraction systems combine extremely large filter capacity with high airflows and pressure, making it ideal for heavy duty applications that generate large amounts of gaseous organic compounds.

The coalescing filters trap glycol mist and combine it into larger droplets. These droplets then drip away from the filter when the extractor is stopped due to its reverse flow design. An automatic drain located in the base of the unit opens as soon as the extractor stops, allowing the glycol to exit the machine and be collected in a tray.

The ‘easi-seal’ filter location mechanism makes filter change easy, quick and safe.

**Approvals** CE

**DYE SUBLIMATION**
PRINTING & 3D PRINTING FUME EXTRACTION
PrintPRO and 3D PrintPRO range

3D PrintPRO 2
The 3D PrintPRO 2 is a low cost unit which extracts fumes generated by the printer without causing the filament deposition area to be cooled.
It has the benefits of low noise level and minimal power consumption. Each unit is supplied with a connection hose, ‘stay put’ arm, conical shaped nozzle and ‘print your own’ plenum instructions.

For more information see page 35.

Approvals CE

3D PrintPRO 3
The 3D PrintPRO 3 incorporates an externally mounted plenum system which effectively captures fumes generated during the printing process and returns ultra clean, filtered air to the operator’s breathing zone.
It has the benefits of low cost, low power consumption and integral speed control. Each filtration unit is supplied with connection hoses and ‘print your own’ plenum instructions.

For more information see page 35.

Approvals CE

3D PrintPRO 4
The 3D PrintPRO 4 provides a high fume extraction and filtration rate when connected to a large enclosed 3D printer via its extraction take off point. The system can also return the filtered clean air either back to the printer enclosure for a cleaner print area or to the operator’s breathing zone.
It combines high flow rate with speed control within a compact free standing unit.

HOW TO BUY BOFA
Go to page 10 to view our different buying options.
‘PRINT YOUR OWN’ 3D MANIFOLDS

The BOFA 3D manifolds for 3D printing are provided free of charge for you to print your own.

The two manifolds are designed to work with the 3D PrintPRO 2 and 3 extraction systems, to provide an air delivery system on one side of the 3D printer, and an air extraction system on the other.

There are four parts to each of the manifolds: a connection spigot; the first end piece; a middle piece (which can be repeated to extend the manifold); and an end piece.

The air outlet has slots along the top of the manifold, allowing a clean band of ultra clean air to flood the open face of the printer.

The air inlet manifold has a open grill of hexagons sucking in the contaminated air, which will pull all the fumes and printing vapours away from the 3D printing area, allowing for a clean working environment and precise final print.

The end plug and connection spigots can be put on either end of the manifold and there is a choice of a straight or 90 degree bend spigot, to allow for correct positioning on the 3D printer.

bofainternational.com/en/print-your-own

FILTER TECHNOLOGY

The PrintPRO and 3D PrintPRO ranges incorporate a range of specially treated carbon filters specifically designed for print fumes, foam sponge filters and cheaper pre filters and high efficiency HEPA filters to provide maximum long life filter capacity, operator safety and low cost of ownership. This combination provides complete filtration protection for any printing application.

For more information visit bofainternational.com/filters

ACCESSORIES

BOFA has an extensive selection of hose kits, including the free downloadable ‘print your own’ manifolds for 3D printing, (see above) which fit all types of applications and printing processes.

For more information, see page 58; contact your sales representative; or visit bofainternational.com/accessories
Work with BOFA to create the perfect solution for you...

The 3D printing and additive manufacturing industry is moving at a rapid pace with new materials and processes being tested and implemented all the time. We already work with companies to create personalised and bespoke solutions, whether they are stand alone; ride on; or integrated solutions.

**PERSONALISED SOLUTIONS**

**Product customisation**

Speak to our experts about your specific requirements and how we can work with you to create the perfect system to complement your product.

- Sockets and connectors
- VOC sensor
- Compressor
- Air conditioner

**Customisable controls and communications**

- Universal voltage system – one part number worldwide
- Auto start/stop
- Overrun
- Warnings and alarm outputs

**Customised branding**

Standard BOFA unit
+ product branding
+ your specific paint colour
+ accessories
+ spare filters
+ hose kit

**BESPOKE SOLUTIONS**

**Unique products**

Working with BOFA you’ll have access to our unrivalled expertise to develop bespoke, personalised solutions.

Customised controls and communications

- Universal voltage system – one part number worldwide
- Auto start/stop
- Overrun
- Warnings and alarm outputs

**Customised branding**

Standard BOFA unit
+ product branding
+ your specific paint colour
+ accessories
+ spare filters
+ hose kit

Unit, filters and accessories, specific to your requirements.

MECHANICAL ENGINEERING

DUST EXTRACTION

DustPRO range

Applications

- Drilling
- Routing
- Mechanical engraving
- Grinding
- Rotary engraving
- Linishing

- CNC
- Artifact restoration
- Dust collectors
- Industrial air filtration
- Chip collectors
- Weld cleaning
BOFA’s DustPRO range of dust, particulate and fume collectors and extraction systems have been designed for the safe and effective removal of particulate, dust and swarf generated during processes.

FEATURED PRODUCT – BEST IN CLASS

DustPRO Universal

BOFA’s DustPRO Universal stand alone dust extraction unit has been developed for the safe and effective removal of swarf and smaller particulates during processes such as routing, mechanical engraving, grinding and turning.

Standard features

- Digital speed control - for variable airflow rates
- Auto sensing voltage (90-257V) for global use
- Filters with long life and low replacement cost
- High vacuum blower for effective capture from source
- Brushless motor = longer life
- High efficiency five layer large capacity easy change filter
- HEPA filtration
- Filter full indicator
- Quiet in operation
- Small footprint

For optional features, see page 43.

The unit’s high vacuum pump is brushless and designed for long-term continuous running.

MECHANICAL ENGINEERING DUST EXTRACTION

DustPRO range

**DustPRO 50**

The DustPRO 50 is a small, compact high vacuum unit with a large capacity bag filter for light weight applications. One of the main problems with other router extraction relates to the type of blower used. Most have brushed motors which are noisy in operation and frequently burn out, with the average life of brushes being around 800 hours. The blower used in the DustPRO 50 dust and fume extraction system is brushless and designed for continuous running.

**Approvals** CE

**Dimensions**

575 x 320 x 295mm
22.64 x 12.60 x 11.61”

**Airflow/Pressure**

80m³/hr / 100mbar
47cfm / 100mbar

**Technology**

Datasheet download
bofainternational.com/dustpro-50

---

**DustPRO 75**

The DustPRO 75 is a medium, compact high vacuum unit with a large capacity bag filter for light weight applications. One of the main problems with other router extraction relates to the type of blower used. Most have brushed motors which are noisy in operation and frequently burn out, with the average life of brushes being around 800 hours. The blower used in the DustPRO 75 dust and fume extraction system is brushless and designed for continuous running.

**Approvals** CE

**Dimensions**

575 x 320 x 295mm
22.64 x 12.60 x 11.61”

**Airflow/Pressure**

120m³/hr / 100mbar
70cfm / 100mbar

**Technology**

Datasheet download
bofainternational.com/dustpro-75

---

**DustPRO 100**

This unit has been developed for the safe and effective removal of swarf and smaller particulates during processes such as routing, mechanical engraving, grinding and turning. Its brushless motor is designed for continuous running and generates high vacuums while being quiet in operation. The large capacity bag filter has a very high efficiency.

**Approvals** CE

**Dimensions**

570 x 460 x 730mm
22.44 x 18.11 x 28.74”

**Airflow/Pressure**

180m³/hr / 110mbar
105cfm / 110mbar

**Technology**

Datasheet download
bofainternational.com/dustpro-100

---

**DustPRO 250**

BOFA’s DustPRO 250 has a higher airflow, enabling stronger extraction. The blower used in the DustPRO 250 is brushless and designed for longer continuous running before requiring servicing. The bag filter has a large 6.4 litre capacity and the HEPA filter makes it highly efficient.

The optional 24V start/stop and filter change system failure signal ensures efficiency in the running of the unit.

**Approvals** CE

**Dimensions**

520 x 290 x 270mm
20.47 x 11.42 x 10.63”

**Airflow/Pressure**

180m³/hr / 30mbar
105cfm / 30mbar

**Technology**

Datasheet download
bofainternational.com/dustpro-250
DustPRO 400
The high vacuum blower used in the DustPRO 400 is the most powerful amongst the smaller units in the DustPRO range. It is brushless and designed for longer continuous running before requiring servicing. The bag filter has a large 6.4 litre capacity and the HEPA filter has very high efficiency of 99.997% removal at 0.3 microns.

Approvals
CE

Dimensions
600 x 290 x 270mm
23.62 x 11.42 x 10.63”

DustPRO Universal
The DustPRO Universal is BOFA’s first choice industrial stand alone dust extraction and filtration system. Due to its high airflow and pressure rates, combined with a large 18 litre capacity filter bag and highly efficient HEPA filter, this unit is compact and versatile, meaning you can position it in a location to suit your application without hindering your process.

The unit’s high vacuum blower is brushless and designed for longer running before requiring servicing.

Approvals

DustPRO 500 iQ / 1000 iQ / 1500 iQ
These mid to high end extraction systems combine a 100 litre filter capacity pre filter with high airflow and pressure rates, making them the ideal choice for heavy duty applications that generate large amounts of particulate, with the added protection of the large HEPA filter.

One of the main problems with other dust extractors relates to the type of blower used. Most have brushed motors which are noisy in operation and frequently burn out, with the average life of brushes being around 800 hours. The blower used in these three units is brushless and designed for longer continuous running before requiring servicing.

Performance is further enhanced with the inclusion of several new features including our Intelligent (iQ) Operating System.

The units can be further enhanced with an additional silencer exhaust box.

Approvals
CE | cUL | UL

Dimensions
1205 x 615 x 790mm
47.44 x 24.21 x 31.10”

Mobile FumeKART
The FumeKART is the ideal portable air extraction and filtration unit and can be applied to a variety of applications.

Designed to filter dust particles, mold spores, solvent vapours and other pollutants from the work environment, the FumeKART is easy to operate and maintain and provides the additional benefit of being fully portable.

Users will have flexibility and the assurance of high performance filtration. A filter condition indicator is included as a standard feature, together with three-stage filtration: pre filter, HEPA and gas filter.

Approvals  CE

Dimensions  840 x 475 x 550mm
33.07 x 18.7 x 21.65”

FILTER TECHNOLOGY
The DustPRO range incorporates large pre filter bags, coupled with high efficiency HEPA filters to provide maximum long life capacity, operator safety and low cost of ownership. This combination provides complete filtration for any industrial application.

For more information visit bofainternational.com/filters

INLINE FILTERS
We have a range of inline filters ideal for heavy duty applications.

For more information, please see page 60-61.

ACCESSORIES
BOFA has an extensive selection of hose kits to fit all types of applications and processes.

For more information, see page 58; contact your sales representative; or visit bofainternational.com/accessories

DENTAL DUST AND FUME EXTRACTION

DentalPRO range

Applications

- Dental milling
- Zirconium milling
- Aluminium oxide milling
- Dust extraction
- Spindle drivers
- Zirconia

| Local ventilation / fume extraction and filtration
| Monomer mixing
| Hand working processes
| CAD/CAM manufacture
| Crown and bridge frameworks |
BOFA’s DentalPRO range of fume extraction systems effectively removes potentially harmful zirconia dust and particulate generated during the CAD/CAM manufacture and hand finishing of crown and bridge frameworks for dental implants.

DentalPRO Xtract 300

The Xtract 300 is ideally suited to manual bench top applications and provides technicians the flexibility to work without restriction in the knowledge that dust particles and fumes are being effectively removed to maintain a safe working environment.

This system combines maximum technician protection in one compact unit, with scalable and flexible options with different accessories, lighting and internal storage.

**Standard features**
- Easily replaced screen protector ensures clear visibility at all times
- Internal storage trays
- Padded arm rests
- Internal LED lighting
- Rear entry grommets for mains powered hand finishing units
- Interchangeable accessories
- Removable collection trays
- Strong rigid construction

*For optional features, see page 49*

Flagship dust and fume extraction dental cabinet designed for multiple hand finishing or monomer mixing applications.

## DentalPRO Range

### DentalPRO MONO

The DentalPRO Mono under bench fume extraction system effectively removes toxic fumes and vapours emitted by the mixing of monomers in dental laboratories. Designed for use with the DentalPRO Xtract 100 (page 48) or 200 (page 48) fume cabinets, this compact unit is ideally suited to monomer mixing applications with its large chemical filter. The low noise motor used in the DentalPRO Mono is brushless and designed for longer continuous running before requiring servicing.

This system combines easy controls with maximum technician protection, in a small footprint with low running costs.

**Approvals** CE

- 106cfm / 30mbar

**Datasheet download**

bofainternational.com/dentalpro-mono

### DentalPRO 150

BOFA’s new DentalPRO high vac under bench dust extraction system effectively removes particulates generated during hand finishing of dental implants. It has a reduced foot print, making it ideal for positioning under or on the side of the work bench so technicians can work safely and without restriction.

**Approvals** CE

### DentalPRO 250

BOFA’s DentalPRO 250 under bench dust extraction system effectively removes particulates generated during the hand finishing of dental implants. It is ideally suited to manual bench top applications, where technicians need to be able to work without restriction, but in the knowledge that dust particles are being effectively removed to maintain a safe working environment.

A brushless motor, designed for longer continuous running before requiring servicing, a large bag filter with a 6.4 litre capacity and a high efficiency HEPA filter make this unit perfect for a single user system, combining maximum operator protection with a small footprint. It is an easy to operate unit with low running costs.

**Approvals** CE

bofainternational.com/dentalpro-250

### DentalPRO 400

This under bench multi user system effectively removes particulates generated during the hand finishing of dental implants and is ideally suited to manual bench top applications. Technicians can work without restriction, but in the knowledge that dust particles are being effectively removed to maintain a safe working environment.

A brushless high vacuum blower, for longer continuous running before requiring servicing, a bag filter with a large 6.4 litre capacity and a high efficiency HEPA filter make this unit perfect for dental hand finishing work for multiple users and low running costs.

**Approvals** CE

**DentalPRO Universal**

BOFA’s DentalPRO Universal stand alone dust extraction system effectively removes smaller particulates generated during the CAD/CAM milling of dental implants. The unit’s high efficiency two-stage filtration process allows technicians to work safe in the knowledge that dust particles are being effectively removed to maintain a clean working environment.

The unit’s high vacuum pump is brushless and designed for continuous running for longer periods of time before requiring servicing. The bag filter has a large 18 litre capacity and the HEPA filter is highly efficient.

---

**DentalPRO Base**

BOFA’s DentalPRO Base is a ride on dust extraction system, which effectively removes smaller particulates generated during the CAD/CAM milling of dental implants. The unit is designed for the milling machine to be securely placed on top of the extraction system, which itself doubles up as a space saving stand.

The unit’s high efficiency two-stage filtration process allows technicians to work safe in the knowledge that dust particles are being effectively removed, to maintain a clean working environment. The bag filter has a large 18 litre capacity and the HEPA filter has an efficiency of 99.997% down to 0.3 microns.

The high vacuum blower is brushless and designed for longer continuous running before requiring servicing. An added optional extra is an onboard compressor providing the miller with clean oil-free air for all compressed air requirements.

**Approvals**

---

**DentalPRO 1000 iQ**

BOFA’s DentalPRO 1000 iQ’s high airflow and pressure combined with extremely large filter capacity (100 litres) makes it perfect for multi station extraction. It is ideal for heavy duty applications that generate large amounts of particulate, especially multi-milling unit extraction.

The pump used in the DentalPRO 1000 iQ dust and fume extraction system is brushless and designed for continuous running before servicing. The option of adding a silencer box means you can have quieter running operation.

**Approvals**

---

**DentalPRO 1000 iQ M**

This unit combines extremely large filter capacity with high airflow and pressure rates, making it the ideal choice for heavy duty applications that generate larger amounts of particulate during the CAD/CAM milling of dental implants. It is designed as a centralised system, for multiple milling machines to be used at once.

The high efficiency two-stage filtration process allows technicians to work safe in the knowledge that dust particles and fumes are being effectively removed, to maintain a clean working environment. The large capacity bag filter provides long life, while the HEPA filter has an efficiency of 99.997% down to 0.3 microns ensuring a safe working environment.

DentalPRO range

DentalPRO Xtract 100
BOFA’s DentalPRO Xtract 100 dust and fume extraction cabinet is designed for the effective removal of potentially harmful dust and fumes generated during dental hand finishing or monomer mixing applications. This unit is ideally suited to manual bench top applications and provides technicians with a well lit enclosure, giving them the flexibility to work without restriction in the knowledge that dust particles and fumes are being effectively removed to maintain a safe working environment. This system combines maximum technician protection in a small footprint, with scalable and flexible options.

Approvals  CE

Dimensions  290 x 400 x 345mm
11.42 x 15.75 x 13.58”

Opening Dimensions  265 x 400mm
10.4 x 15.6”

PHARMACEUTICAL & MEDICAL
FUME EXTRACTION

FumeCAB range

Applications
General room ventilation
Fluid bed drying
Parts making
Chiropody
Spray drying
Chemical control
Tablet pressing & coating
Blending & granulation
Culture preparation
Mixing
Pipetting
Asbestos
Powder weighing & handling
Conformal coating
Pathology labs
Clean room
Testing
Our pharmaceutical and medical fume extraction range can be applied to a number of related applications associated with R&D laboratories and manufacturing facilities. They are ideal for applications that require the operator to work in close proximity to the process for precision accuracy but within an enclosed area.

**FEATURED PRODUCT – BEST IN CLASS**

**FumeCAB 1000 iQ**

The high performance FumeCAB 1000 iQ integrated filtration system boasts a large working area with bright ultra slim energy saving LED strip lights plus UV lights as optional.

**Standard features**

- Combined HEPA/gas filter incorporating advanced carbon filter technology
- Certified to BS 7989:2001 - recirculatory filtration fume cabinet specification
- Ensures operational compliance with HSG258 guidelines
- Energy saving ultra-bright slimline LED lighting
- Twin coated anti UV/anti splash protective polycarbonate visor
- Audible and visual warning alarms
- Also available in tall or deep, and with ESD or conformal coating

*For optional features - see page 53*

Available versions:

- Tall
- Deep
- Conformal coating
- ESD

PHARMACEUTICAL & MEDICAL FUME EXTRACTION
FumeCAB range

**FumeCAB 250**
A small but versatile fume cabinet which can be used for an array of applications.
Partial enclosures are steadily becoming the preferred option for operator protection from fumes generated from processes that produce harmful fumes.

*Ideal partner to the V250 - see page 25*

**Dimensions**
- 290 x 400 x 300mm
  - 11.42 x 15.75 x 11.81"
- Opening Dimensions
  - 265 x 400mm
  - 10.4 x 15.7"

**Technology**
- DeepPleat
- HEPA filter
- Advanced carbon filter technology

**Datasheet download**
bofainternational.com/fumecab-250

---

**FumeCAB 600**
Providing a larger working area with higher airflow for use in several applications, the FumeCAB 600 boasts the same features as the FumeCAB 250 and works alongside the V600 extraction system to protect the operator.

*Ideal partner to the V600 - see page 26*

**Dimensions**
- 355 x 610 x 420mm
  - 13.98 x 24.02 x 16.54"
- Opening Dimensions
  - 315 x 540mm
  - 12.4 x 21.3"

**Technology**

We have a comprehensive range of extraction systems suitable for laboratories and industrial processes, whether they generate small amounts of fine particulate or large volumes of dust.

See pages 38-43 for more information.

FILTER TECHNOLOGY
The integrated FumeCAB provides a safe working environment protected by a three-stage filtration system consisting of a cheaper, more cost effective pre filter, high efficiency HEPA filter and a large carbon filter specifically designed to capture all the particulate and fumes generated in pharmaceutical and medical applications.

For more information visit bofainternational.com/filters

ACCESSORIES
BOFA has an extensive selection of hose kits to fit all types of applications and processes. There are a large number of product options too - see page 58; speak to your sales representative; or visit bofainternational.com/accessories

HOW TO BUY BOFA

BEAUTY
FUME EXTRACTION
Sleek fume extraction systems for modern beauty and hair salons

Applications
Manicures
Nail filing
Nail varnising

Pedicures
Gel and acrylic nails
Nail dust

Hair salons
Podiatry
Our PureBEAUTY fume extraction range incorporates our years of knowledge in the extraction and filtration industry with sleek design to provide innovative, salon friendly solutions to specifically remove and safely capture a range of harmful and toxic fumes and dust found in the salon environment.

**FEATURED PRODUCT – BEST IN CLASS**

**PureBEAUTY**

The PureBEAUTY extraction system is easily portable and adaptable so will fit easily into any salon, without the costly need to replace existing nail stations or furniture.

It is easy to install and use, removing any toxic fumes and dust particulates generated during beauty processes. This unit helps you adhere to regulatory Health and Safety standards, keeping you, your staff and your customers safe and protected.

**Standard features**

- Low noise levels
- Advanced carbon filter technology
- Filter blocked indicator
- Compact system

*For optional features - see page 57*

PureBEAUTY

The PureBEAUTY fume extraction, air purification system has been designed to extract dust and fumes generated during many beauty processes, including nail tratements. It will fit easily and discreetly into any salon, without the costly need to replace existing nail stations or furniture.

Approvals  CE

PureBEAUTY+

The hazards associated with quick-dry nail sprays, nail varnishes and removers, as well as nail extension materials need to be assessed under the UK COSHH regulations. The main concern is the inhalation of dust or solvent fumes produced when using these products.

The multi-layered pre and chemical filters in the PureBEAUTY+ captures all the contaminent and returns clean air into the salon. It fits into any salon, without the need to replace existing nail stations or furniture.

Approvals  CE

Mobile FumeKART

The FumeKART is the ideal portable air extraction and filtration unit and can be applied to a variety of applications.

Designed to filter dust particles, vapours and other pollutants from the work environment, the FumeKART is easy to operate and maintain and provides the additional benefit of being fully portable.

Users will have flexibility and the assurance of high performance filtration. A filter condition indicator is included as a standard feature, together with three-stage filtration: pre filter, HEPA and gas filter.

Approvals  CE

Dimensions  420 x 290 x 270mm
Airflow/Pressure  90m³/hr / 20mbar

Dimensions  420 x 290 x 270mm
Airflow/Pressure  180m³/hr / 30mbar

Dimensions  875 x 475 x 430mm
Airflow/Pressure  380m³/hr / 100mbar
### FILTER TECHNOLOGY

The PureBEAUTY range incorporates cheaper cost effective pre filters with large carbon filters specifically designed for salon environment applications. Coupled together they provide maximum long life filter capacity to give operator safety with low cost of ownership. This combination provides a complete filtration system for any salon setup.

For more information visit [bofainternational.com/filters](http://bofainternational.com/filters)

### ACCESSORIES

BOFA has an extensive selection of arms, down draught trays and hose kits to fit all types of salon applications and processes. See page 58; contact your sales representative; or visit [bofainternational.com/accessories](http://bofainternational.com/accessories)

PIPEWORK

We offer a wide range of pipework available in 50mm, 75mm, 110mm, 125mm. Speak to your sales representative to ensure you get the right pipework for your system.

TCU

The Temperature Control Unit (TCU) has been designed to meet a very specific process requirement within the electronics sector. The reliable placement of surface mount devices during PCB assembly requires that during the initial printing stage the solder paste is maintained at a temperature which ensures optimum performance. With assembly now on a global basis the variation of local climate and factory conditions means that this optimum level cannot be maintained without some form of intervention.

The design of the TCU includes cooling and heating elements which ensure that the temperature within the printing environment is maintained within 1°C of the optimum paste performance temperature regardless of whether the factory ambient is above or below this level.

INLINE FILTERS
Dust and fume extraction products

AD CYCLONE
Laser marking generates a range of particle sizes from 0.1 micron upwards so standard cyclone separators are not suitable.

BOFA's inline cyclone is designed to operate more efficiently at these lower particle sizes.

The cyclone separator has been designed specifically for use with the AD Oracle iQ and AD Oracle iQ2 (see page 16) and is installed between the laser extraction point and the extractor. The airflow generated by the extraction unit powers the cyclone.

| Dimensions | 800 x 300 x 140mm
|            | 31.5 x 11.81 x 5.51” |
| Datasheet download | bofainternational.com/ad-cyclone |

ILF 300/600
The BOFA inline pre filters have been designed specifically for applications that generate high amounts of dust or particulate.

The filter unit is positioned alongside the main BOFA fume filtration system to increase the overall filter capacity and extend the life of the main, more expensive filters.

A range of application dependent filter types and configurations are available on request.

| ILF 300 | Dimensions | 796 x 638 x 328mm
|         |            | 31.34 x 25.12 x 12.92” |
|         | Datasheet download | bofainternational.com/ilf-300 |
| ILF 600 | Dimensions | 820 x 631 x 635mm
|         |            | 32.28 x 24.84 x 25” |
|         | Datasheet download | bofainternational.com/ilf-600 |

ILF 1000
The BOFA inline pre filter 1000 has been designed specifically for applications that generate high amounts of dust or particulate.

This inline filter unit has a large DeepPleat DUO and is positioned alongside the main BOFA fume filtration system to increase the overall filter capacity and extend the life of the main filters.

| Dimensions | 650 x 617 x 763mm
|            | 25.6 x 24.3 x 30” |
| Datasheet download | bofainternational.com/ilf-1000 |
Spark Arrestor 2

BOFA’s Spark Arrestor 2 unit effectively prevents potentially damaging burning particulates, generated during laser marking processes, from entering the fume extraction unit.

Hot burning particulate is transported through the specially designed plates positioned within the airflow, slowing the burning particulate down until it finally drops into the removeable drop-out chamber, so protecting the fume extractor.

FireBOX GA/MA and FireBOX GA+/MA+ self-extinguishing inline pre filter

In the rare event that a burning ember is drawn into the fume extraction unit, there is the possibility that debris in the filters could ignite. Although any resultant fire would typically be retained within the fume extraction unit, this would cause significant damage and in extreme circumstances the risk may extend beyond the extraction unit. For processes where such risks have been identified, additional protection in the form of an inline firebox is an additional precaution. We offer two sizes of our FireBOX to cater for different size extraction units.

FireBOX GA/MA

For added safety and protection from fire. The built-in temperature controller can be set so when a 10°C temperature rise is detected, the FireBOX will activate the isolating valves and switch off the power to the extraction unit, suppressing the airflow to the FireBOX and reducing the speed of fire. If this does not suppress the fire and the temperature rises another 10°C then the fire extinguisher will be activated.

Ideally paired with AD Oracle SA iQ; AD Oracle iQ; and AD Oracle iQ2 (pages 15-16).

WHICH PRODUCT DO YOU NEED?

The FireBOX GA/GA+ is designed for general applications.

The FireBOX MA/MA+ is designed specifically for metal-based applications.

Speak to your sales representative to ensure you chose the right system.
We invest heavily in R&D to ensure we are ahead of the game, providing global solutions to global customers.

The growth in demand for fume extraction looks set to continue the world over, giving manufacturers that have sufficient vision the confidence to invest in resources to develop new products and features to challenge convention and raise the bar in the portable fume extraction world.

**Integrated SYSTEMS**

**Added safety; no additional footprint**

Production processes are evolving all the time. Demand for faster processes and changes in materials means new technology – such as fibre lasers - is being developed to increase productivity gains while keeping running costs down. What is also emerging in this new era, is the fundamental role that effective fume extraction plays in ensuring a safe operating environment and in optimising the return on investment of this technology. Added to this is the need to keep the footprint of new products to a minimum. BOFA’s AD 1000 iQ with integrated FireBOX pairs high capacity fume extraction with all the benefits of a FireBOX, without taking up any additional floor space.

**DeepPleat DUO with INTEGRATED SPARK ARRESTOR**

This new DeepPleat DUO pre filter has an integrated spark arrestor box built into the base, acting as a safe-guard precaution by protecting the filter media from sparks which may have been generated during the layering process.
High speed

**CAPTURE DEVICES**

The world is getting faster... and so is BOFA. We have developed new capture devices to cater for faster production processes.

BOFA’s modular high speed capture devices provide enhanced capture on fast moving production lines, overcoming increased turbulence created by the moving products.

- Improving capture
- Optimising extraction
- Reducing maintenance

3D and

**ADDITIVE MANUFACTURING**

In the world of rapid prototyping and production of metal components, it is imperative to have the proper gas atmosphere to produce quality parts. To meet the high tolerance standards required in 3D printing, argon and nitrogen are commonly used to provide inert atmospheres.

We are continuously exploring new technology and are designing a pressurised filter system to work in the 3D and additive manufacturing industry, providing a safer working environment dealing with the likes of cobalt chrome and titanium metals.
